Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „kuckkuck“ vom 3. November 2019, 11:03

Please tell me how you implemented XMAX Extended. If you are not using XMAX Extended from the first post you will get a black screen if your iGPU in the ROM is activated as well as the dedicated GPU (--> deactivate iGPU in BIOS). If you are using XMAX Extended the same thing will happen unless you implement the device properties for your iGPU correctly.
