[user = '59649'] julian91 [/ user] If the surcharge is worth it? You have to know yourself. Can a non XT yes synonymous something overclocking.

[user = '763'] al6042 [/ user] Now you have bought the same card as me. Well. If such a warhorse as you buy such a map, I keep mine. That is NOT stable. Yours so far without crashes? So join me [user = '25342'] Wolfe [/ user] s question.

PS: Can one somehow read out the temps of the GPU?

Hey,

Sorry I do not speak english 😞

I write you from the south of France.

I'm currently reading the forum with google chrome automatic translate...

I've modified RadeonMonitor FakeSMC plugin to be able to read the RX 5700 XT GPU core temps because I wasn't able to find a viable solution with VirtualSmc ...

Find the modified kext attached (Modified RadeonMonitor.kext with the corresponding FakeSMC.kext)

Regards,

Greg
