

# OpenCore Sammelthread (Hilfe und Diskussion)

**Beitrag von „al6042“ vom 8. November 2019, 07:30**

This seems to be a common issue with the 5700/5700XT, since I didn't had the problem with the Vega56.

You can follow the progress for the 5700s in the following thread -> [AMD NAVI / RDNA \(RX5700/XT etc.\) in macOS | Benchmarks, Undervolting, Overclocking, PowerPlay Table](#)

Please leave the the current thread to just post working desktop configs.
