OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „kuckkuck“ vom 10. November 2019, 15:23

[firefly can fly](#) Looking at your bios-test.rom I see the following:

You are not using Ozmosis XMAX Extended from here: [Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX \(extended\)](#)

You are not using an up-to-date KernextPatcher.plist and also your KernextPatcher and AcpiPatcher Drivers in the Rom are outdated. Take a look at the provided thread.

You are not using a dedicated Aptio-Fix, all information can be found at the provided thread.

You are using an outdated ApfsDriverLoader.

You are using an outdated OzmosisDefaults.plist

I hope that you will be able to create your own Catalina ROM with this knowledge. Good luck!
