OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „firefly_can_fly“ vom 10. November 2019, 21:25

[Zitat von kuckkuck](#)

[firefly_can_fly](#) Looking at your bios-test.rom I see the following:

You are not using Ozmosis XMAX Extended from here: [Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX \(extended\)](#)

You are not using an up-to-date KernnextPatcher.plist and also your KernnextPatcher and AcpiPatcher Drivers in the Rom are outdated. Take a look at the provided thread.

You are not using a dedicated Aptio-Fix, all information can be found at the provided thread.

You are using an outdated ApfsDriverLoader.

You are using an outdated OzmosisDefaults.plist

I hope that you will be able to create your own Catalina ROM with this knowledge. Good luck!

Thank you for guidance, i managed to make this rom:

[test_bios2.rom](#)

But im struggling with adding proper values to defaults.plist

Can you hook me up on how to properly add all the values for imac 15.1?

I understand that firmware features and mask are new, same as bios version should be. But i can't properly implement them.
