ellybz

Your "config.plist" does not help. You write "ACPI patches are not needed anymore", but 14 SSDTs are used (they implement the corresponding ACPI patches). These are not attached. So unfortunately unusable. Anyway, I think the SSDTs are from "KGP". The name "SSDT-DTPG.aml" indicates this. The method used is actually called "DTGP" - this typo has always occurred with "KGP". So nothing new.
