

[Sammelthread] macOS Catalina 10.15 Dev-Beta Erfahrungen

Beitrag von „Achilles31“ vom 21. November 2019, 19:41

Hardware Info Detected by VideoProc

Processor	3.60 GHz Intel Core i9	Graphics	N/A	Software	10.15.2 (19C32e)
------------------	------------------------	-----------------	-----	-----------------	------------------

	Max Resolution	N/A
	Status	Unavailable
	Hardware Accel	<input type="checkbox"/> Enable

	Max Resolution	4K (4096x2160) main@auto
	Status	Available
	Hardware Accel	<input checked="" type="checkbox"/> Enable

	Hardware Decoder	Video Processing	Hardware Encoder
H264	<input type="checkbox"/> Enable	<input type="checkbox"/> Enable	<input type="checkbox"/> Enable
HEVC	<input checked="" type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable	<input checked="" type="checkbox"/> Enable

* Hardware decoder will be applied in decoding.

* Process video in GPU if enabled.

* Encode video in GPU instead of CPU.

[Process video with hardware acceleration](#)

[CMMChris](#) bei mir schaut es momentan so aus - habe ich Handlungsbedarf - sorry in dem Bereich bin ich noch nicht fit !

WEG 1.3.4
