

[SUCCESS] Gigabyte Z390 M Gaming + RX 580 Nitro+ [EFI im Anhang]

Beitrag von „hsathler“ vom 6. Dezember 2019, 13:19

Hello guys! First post! Sorry for posting in English. Unfortunately, despite being a gran gran son of Germans they don't teach the language in the family for generations. Sorry for my possible bad english too, as it's not my first language.

I want to thank you all, especially @ [Kazuya91](#) ! I was searching for a solution to shutdown / sleep / restart on my build and stumbled in this topic and found the EFI file attached to the first topic and tried it, for the first time and now appears to working now.

I would like to know all USB 2.0 ports instead of just one. If yes, can anyone teach me how to do this?

Thanks in advance!

[Edit]: My external USB backup HD keeps "Unproperly Ejecting". Using my old EFI (no shutdown/sleep/restart), the drive keeps connected. Any advice?
