Vorke V8 Mini PC (i7-8750H): IGPU will nicht

Beitrag von „thexsenator“ vom 9. Dezember 2019, 01:29

Managed getting sleep to work. Problem was the Wifi/BT card (Dell DW1820), swapped it to BCM94360CS2.

After wake VDADecoderChecker, VLC, Videoproc dont work, after launching the app you only get a forever spinning beachball. Chrome, Youtube videos, sound, network, bt... are working after wake. Thank you so much for your help and cooperation.
