

[SUCCESS] Gigabyte Z390 M Gaming + RX 580 Nitro+ [EFI im Anhang]

Beitrag von „hsathler“ vom 9. Dezember 2019, 13:32

Hi, @Kazuya91. Thank you very much for the kindly repply. Nevermind about HD repply. Tried again yesterday with another cable and everything is working perfect. It's strange because I ever used the original case cable that always worked. After replacing the cable, I could transfer about 900GB without any concern.

So my only other question: Is it possible to enable all four USB 2.0 internal ports? How can I do that?

Thanks again for all support!
