

Erledigt **WX 2100/3100/3200**

Beitrag von „DSM2“ vom 18. Dezember 2019, 13:38

Nur um nochmal klarzustellen:

rubenszy Du hattest ja dieses Bild gepostet

Radeon 400 series (Polaris) Highest Supported OS: Current/Mojave 10.14.6

Regarding Polaris, basically every model of card is supported as long as it's running a Polaris core (lower end cards like the RX550 run a Vega core meaning no support in MacOS).

The only brand of GPU you should avoid with the Polaris series would be XFX as many users have had issues with these cards with viewing Clover and MacOs booting but other users have found fixes/work arounds. This is caused by having an odd VBIOS that doesn't communicate well with MacOs, only real solution is flashing another VBIOS which is not ideal.

Supported cards:

- RX 460/560
- RX 470/570
- RX 480/580
- RX 590
- WX 2100
- WX 3100
- WX 4100
- WX 5100

Needed kexts:

- [Iku.kext](#)
- [WhateverGreen.kext](#)

Weder WX 2100 noch WX 3100 liefern jemals mit macOS, da hilft auch kein Inject irgendwelcher Fake Properties.

Nicht anders verhält sich das ganze mit einer WX 3200! War mir zwar von Anfang an klar aber naja...

... | Os1000 | Os1001 | Os1002 | Os1003 | Advanced Mt... | Lexa XT (Radeon PRO WX 3200) | Display.c... | VGA comp... | BJA.GFX0 | Display

Geordert:

Um nichts anderes festzustellen als das was ich erwartet habe, völlig egal welche IDs man vortäuscht.
