

Blackscreen bei Catalina Installation

Beitrag von „g-force“ vom 21. Dezember 2019, 13:20

Hast Du das BIOS entsprechend dieser Anleitung eingestellt?

1. Save & Exit → Restore Defaults : **Yes**
2. Settings \ Advanced \ Integrated Peripherals → Network Stack : **[Disabled]**
3. Settings \ Advanced \ Integrated Peripherals → Intel Serial IO : **[Disabled]**
4. Settings \ Advanced \ Integrated Graphics Configuration → [DVMT](#) Pre-Allocated : **128MB+**
(Or 64MB if that's the highest you can go)
5. Settings \ Advanced \ USB Configuration → XHCI Hand-off : **[Enabled]**
6. Settings \ Advanced \ USB Configuration → Legacy USB Support : **[Auto]**
7. Settings \ Advanced \ Windows OS Configuration → MSI Fast Boot : **[Disabled]**
8. Settings \ Advanced \ Windows OS Configuration → Fast Boot : **[Disabled]**
9. Overclocking → Extreme Memory Profile(X.M.P) : **[Enabled]**
10. Overclocking \ CPU Features → Intel Virtualization Tech : **[Enabled]**
11. Overclocking \ CPU Features → Intel VT-D Tech : **[Disabled]**
12. Settings \ Boot → Boot mode select : **[LEGACY+UEFI]**
13. Settings \ Boot → Boot Option #1 : **UEFI: "macOS_flash_drive_name"**
