Hackintosh erkennt Lan Kabel nicht

Beitrag von „g-force“ vom 30. Dezember 2019, 08:57

BIOS SETTINGS

1. Save & Exit → **Load Optimized Defaults**
2. BIOS → Fast Boot : **Disabled**
3. BIOS → CSM Support : **Disabled** (You might get a blackscreen otherwise with RX 580)
4. Peripherals → Trusted Computing → Security Device Support : **Disable**
5. Peripherals → Network Stack Configuration → Network Stack : **Disabled**
6. Peripherals → USB Configuration → Legacy USB Support : **Auto**
7. Peripherals → USB Configuration → XHCI Hand-off : **Enabled (Extremely important)**
8. Chipset → Vt-d : **Disabled**
9. Chipset → Internal Graphics : Enabled. (Reboot BIOS then next options will appear)
10. Chipset → DMVT Pre-Allocated : **128M**
11. Chipset → DMVT Total Gfx Mem : **256M**
12. Chipset → Wake on LAN Enable : **Disabled**
13. Chipset → IOAPIC 24-119 Entries : **Enabled**
14. Power → Erp : **Enabled** (Fix shutdown & motherboard leds not powering off)

IntelMausi.kext ist schon richtig.
