

OpenCore Sammelthread (Hilfe und Diskussion)

Beitrag von „anonymous_writer“ vom 4. Januar 2020, 18:25

Hallo [julian91](#) ,

[apfelnic0](#) war schneller. 👍

Wenn das auch nicht hilft dann zusätzlich das.

Completed with success after several attempts.

12. **MultiUseClearScreen**
Type: plist boolean
Fallback: false
Description: Some firmwares reset screen resolution to a fallback value (like 1024x768) on the attempts to clear screen contents when large display (e.g. 2K or 4K) is used. This option attempts to apply a workaround.
Note: ConsoleControl may need to be set to true for this to work. On all known affected systems ConsoleKode had to be set to empty string for this to work.
