[Sammelthread] Must Have Apps für Macintosh/Hackintosh

Beitrag von „blubass“ vom 7. Januar 2020, 08:55

Moin!!

Hab` noch ein nützliches kleines tool gefunden!

BlueHarvest keeps your storage devices free of macOS metadata such as `._` files, `.DS_Store` files, `.AppleDouble` folders, `.Trashes` and many many more. It also supports removing Windows metadata including `Thumbs.db`, `Desktop.ini` and `$RECYCLE.BIN`.

BlueHarvest automatically cleans these devices as you work without you needing to do a lift a finger.

Features:

Per device configurations.

Scheduled cleaning.

Custom file backlists (with wildcards) for deleting any file or folder you wish.

The ability to retain metadata if the metadata is required for aliases, labels, custom icons, security data or Finder tags.

"Examine" feature for viewing metadata available for deletion.

Removal of macOS extended attributes from files on Mac disks (non automated).

Built-in support for deleting: `.DS_Store`, `._AppleDouble`, `.apdisk`, `.AppleDouble` (folders via smb), `.com.apple.timemachine.donotpresent`, `.fsevents`, `.Spotlight-V100`, `.TemporaryItems`, `.Volumelcon.icns`, `$Recycle.bin`, `Desktop.ini`, `Icon?`, `Thumbs.db`.

Built in log viewer.
