

OpenCore Sammelthread (Hilfe und Diskussion)

Beitrag von „griven“ vom 10. Januar 2020, 14:05

An keiner 😊

Siehe Dokumentation Seite 38 Punkt 10.2.1 SpoofVendor. 😊 Wenn Dich das Acidanthera als Board Vendor stört dann einfach an der Stelle False setzen und fertig.

Zitat

OEM manufacturer of the particular board. Shall not be specified unless strictly required. Should not contain Apple Inc., as this confuses numerous services present in the operating system, such as firmware updates, efichk, as well as kernel extensions developed in Acidanthera, such as Lilu and its plugins. In addition it will also make some operating systems like Linux unbootable.
