Sorry for such a delay in response, i've managed to install Catalina with your ROM.

I still don't know how, after i received bios you made- i extracted and changed Oz defaults. But after flashing and flushing NVram nothing changed. Yes, i still got that strange flickering of screen in bios (it's happening only with OZ) but couple hours ago i managed to make clean BIOS implementation and now writing you from fresh Cata.

Thank you Griven, you helped me a lot. Next stop is OpenCore and hope i'll would understand it better)
