

Vorke V8: Ernstzunehmende Mac Mini Alternative

Beitrag von „thexsenator“ vom 2. Februar 2020, 20:05

Hallo Allerseits,

I have a problem with my s200 lan connection under Mojave and under Catalina as well... im trying to fix it since last year november... so the ethernet connection drops when copying large or large amount files from the s200 to any of my NAS through SMB. You can see in the log the following when the connection drops:

```
2019-11-20 16:12:35.840388+0100 0x1b5 Default 0x0 0 0 kernel: (kernel) [RealtekRTL8111]: Tx timeout.  
Lost interrupt?
```

This happens to all of Mieke's driver from 2.2.2 to 2.3.0d7.

The issue cannot reproduced under Ubuntu 18 or under Windows 10.

What i have done so far:

- Changed cable from cat5e to shielded cat6
- Changed switch from Netgear to Tplink T1600-
- Tried all the drivers mentioned above
- Tried switching auto negotiation to manual
- EEE off/on
- Disable ASPM in Clover

Any idea?
