

OpenCore Sammelthread (N-D-K Fork)

Beitrag von „karacho“ vom 4. Februar 2020, 16:05

[JimSalabim](#) So sieht es bei mir aus und die Auflösung ist Automatisch 2560x1440.

The image shows a screenshot of a system boot log, likely from a Mac, displaying the OpenCore boot process. The log is organized into sections, with each section starting with a header in bold. The sections include:

- OpenCore**: Shows the version (0.7.0) and the path to the boot loader.
- Kernel**: Lists the kernel (Lilu.kext) and its version (1.2.0).
- Kernel Extensions**: Lists various kernel extensions (kexts) and their versions, such as AppleALC.kext (1.2.0), AppleIntelCPUPowerManagement.kext (1.0.0), and AppleIntelManagement.kext (1.0.0).
- Kernel Parameters**: Lists the kernel parameters (kexts) and their versions, such as AppleIntelCPUPowerManagement.kext (1.0.0), AppleIntelManagement.kext (1.0.0), and AppleIntelPowerManagement.kext (1.0.0).
- Kernel Extensions (continued)**: Lists more kernel extensions and their versions, such as AppleIntelCPUPowerManagement.kext (1.0.0), AppleIntelManagement.kext (1.0.0), and AppleIntelPowerManagement.kext (1.0.0).
- Kernel Parameters (continued)**: Lists more kernel parameters and their versions, such as AppleIntelCPUPowerManagement.kext (1.0.0), AppleIntelManagement.kext (1.0.0), and AppleIntelPowerManagement.kext (1.0.0).

The log ends with the text "Booting..." and "Booting...".
