Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „nikoZ“ vom 19. Februar 2020, 18:07

@[look look](#) Could you help me please?

I recompiled all ozmosis with depex, efipropertydatabase, darboot, devprop and everything.

It appears that my HD4600 listed as Iris Pro, problem solved with lilu and WEG.

A strange problem which I encounter is the fact that I have apple logo without loading bar and I have to reset system couple of times till the progress bar appears.

My system is:

Gigabyte Z87MX-D3H

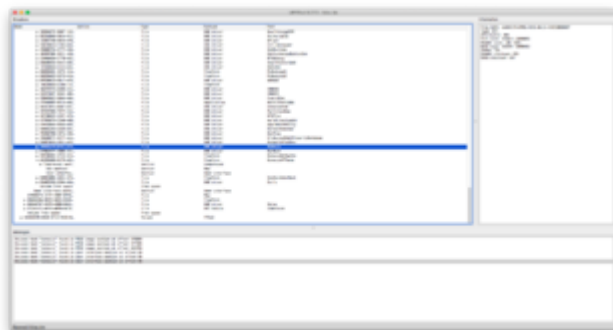

HD4600

i5 4570

My bios it appears like this.

Devprop.plist its inserted into /EFI

Kerernextpatcher.plist its inserted into /EFI

My bios:
