

X299 Tutorial - ASUS WS X299 SAGE/10G (Hilfe und Diskussionen)

Beitrag von „Showking“ vom 22. Februar 2020, 19:10

Thank you DSM2 for this simple and easy guide for x299 Hackintosh.

I have followed your guide ([Bios settings](#) & clover,Kexts) successfully able to boot and run Mojave 10.14.6 and Catalina 10.15.1.

However sometimes it gets kernel panics randomly.Also can't get through a GeekBench run.

Guessing it could be the GPU. Utilising this machine for Pro Audio purpose so I don't need expensive graphics card.

It would be great if you can look at Clover folder attached bellow.

Thank You.

Hardware list :

Motherboard : Asus WS X299 Sage

CPU : i9 7980XE Processor

GPU : Sapphire Radeon Rx 580

M.2 : Corssair Mp600 2tb ssd

Ram : Corsair Vengeance LPX 8x8 (64gb)

SMPS: Corssair 1600 Watts
