I have a very complicated yet easy to answer (because you are all computer savvy)...I am currently stuck at 10.8.5 because my music plugins won't run in any OSX upgrade without each being updated (expensive) and many of them are no longer made. Am I able to install the MacPro5.1-OpenCore to use Thunderbolt Titan Ridge card with my OSX 10.8.5? I am in such a dilemma...either I have to buy a new mac (very expensive) or upgrade so many programs and plugins (expensive option). Any advice would be great. I also want to thank you all for the fun forum and topics...and all your creativity!

no, from 10.13.6 (highsierra) upwards
