Hi,

Since I installed catalina, when I woke up from sleep, the PC is running but the screen remains black. Can you tell me if you have an idea of the cause of this situation?

Thank you in advance.

Hello

I have encountered this situation, through the BIOS to close the serial port to solve. You can try it.

and

My computer occasionally fails to access the system. Do you know why?

I provided a screenshot of the code on the 118th floor.
