> Hallo Deejay ,
>
> Teste mal ob dir die Icons angezeigt werden wenn du in der config.plist den Parameter ScanPolicy auf 0 änderst.
>
> 
> ScanPolicy
> Type: plist integer, 32 bit
> Failsafe: 0xF0103
> Description: Define operating system detection policy.
> This value allows to prevent scanning (and booting) from untrusted source based on a bitmask (sum) of select flags. As it is not possible to reliably detect every file system or device type, this feature cannot be fully relied upon in open environments, and the additional measures are to be applied.
> Third party drivers may introduce additional security (and performance) measures following the provided scan policy. Scan policy is exposed in scan-policy variable of 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102 GUID for UEFI Boot Services only.
> • 0x00000001 (bit 0) — OC_SCAN_FILE_SYSTEM_LOCK, restricts scanning to only known file systems defined as a part of this policy. File system drivers may not be aware of this policy, and to avoid mounting of unlisted file systems it is best not to load its driver. This bit does not affect drag mounting, which may have any file system. Known file systems are prefixed with OC_SCAN_ALLOW_FS_.
> • 0x00000002 (bit 1) — OC_SCAN_DEVICE_LOCK, restricts scanning to only known device types defined as a part of this policy. This is not always possible to detect protocol tunneling, so be aware that on some systems it may be possible for e.g. USB HDDs to be recognised as SATA. Cases like this must be reported. Known device types are prefixed with OC_SCAN_ALLOW_DEVICE_.
> • 0x00000100 (bit 8) — OC_SCAN_ALLOW_FS_APFS, allows scanning of APFS file system.
> • 0x00000200 (bit 9) — OC_SCAN_ALLOW_FS_HFS, allows scanning of HFS file system.
> • 0x00000400 (bit 10) — OC_SCAN_ALLOW_FS_ESP, allows scanning of EFI System Partition file system.
> • 0x00000800 (bit 11) — OC_SCAN_ALLOW_FS_NTFS, allows scanning of NTFS (Mult Basic Data) file system.
> • 0x00001000 (bit 12) — OC_SCAN_ALLOW_FS_EXT, allows scanning of EXT (Linux Root) file system.
> • 0x00010000 (bit 16) — OC_SCAN_ALLOW_DEVICE_SATA, allow scanning SATA devices.
> • 0x00020000 (bit 17) — OC_SCAN_ALLOW_DEVICE_SASEX, allow scanning SAS and Mac NVMe devices.
> • 0x00040000 (bit 18) — OC_SCAN_ALLOW_DEVICE_SCSI, allow scanning SCSI devices.
> • 0x00080000 (bit 19) — OC_SCAN_ALLOW_DEVICE_NVME, allow scanning NVMe devices.
> • 0x00100000 (bit 20) — OC_SCAN_ALLOW_DEVICE_ATAPI, allow scanning CD/DVD devices.
> • 0x00200000 (bit 21) — OC_SCAN_ALLOW_DEVICE_USB, allow scanning USB devices.
> • 0x00400000 (bit 22) — OC_SCAN_ALLOW_DEVICE_FIREWIRE, allow scanning FireWire devices.
> • 0x00800000 (bit 23) — OC_SCAN_ALLOW_DEVICE_SDCARD, allow scanning card reader devices.
> Note: Given the above description, 0xF0103 value is expected to allow scanning of SATA, SAS, SCSI, and NVMe devices with APFS file system, and prevent scanning of any devices with HFS or FAT32 file systems in addition to not scanning APFS file systems on USB, CD, and FireWire drives. The combination reads as:
> • OC_SCAN_FILE_SYSTEM_LOCK
> ...

Hi, hat leider nicht geklappt. Der Wert war auf 0 und ich habe den zum Test auf 1 gesetzt und der OC Bootloader

blieb hängen bei der Anzeige des OS und beim runterzählen des Timers.

Habe dann wieder mit dem MacOSX Bootable USB Stick gebootet und das alte config.plist wieder eingesetzt.

Ist jetz kein Beinbruch. Kann ja über das Bios jedes OS auswählen und Standard ist das Mac OS.

Wäre hat schön gewesen, wenn die 3 Sekunden bei Boot auch das Windows 10 und das Linus sichtbar gewesen wären.

Vielen Dank habe schon viel mehr als erwartet hinbekommen.

Habe trotzdem nochmal meine config.plist angehängt. Vielleicht findet ja noch jemand das Problem.

Vielen Dank und viele Grüsse

Ratko
