## HP Elitebook 820 g1 Intel WIFI Karte

Beitrag von „al6042“ vom 22. März 2020, 10:28

Hallo und herzlich Willkommen im Forum...

Laut dem [Hardware Maintenance Manuel von HP](#) hast du folgende Option:

### Wireless networking

| Description                                                                                                                                                                                                                                                                                                                                                                                                            | HP Elitebook 725 G2<br>Notebook PC | HP Elitebook 820 G1<br>Notebook PC |

Wobei die DELL DW1510, welche diesen Broadcom-Chip nutzt, ab Catalina nicht mehr unterstützt wird, also aktuell nur bis Mojave eingesetzt werden kann.

Falls du mal auf Catalina gehen möchtest, gilt folgender Hinweis:

**Catalina 10.15 dropped support for BCM4322 (14e4:432b) chip. AirPortBrcm4331 plugin kext of IO80211Family kext was abandoned. This affects cards such as DW1510. Workaround is to simply install Mojave's (or High Sierra's) IO80211Family kext, i.e. copy to /L/E + repair permissions + rebuild cache (leaving /S/L/E untouched) or, if that does not work, replace Catalina's IO80211Family kext in /S/L/E by Mojave's (or High Sierra's).**
