## Ozmosis mit macOS Catalina 10.15 - OZ167X-XMAX (extended)

Beitrag von „June“ vom 24. März 2020, 09:21

Hey guys, I got a tricky question: ["End RandomSeed\++++\reboot in Clover and 'No Way Sign'\halt in Ozmosis"](#) , I tried 167X-MASS\ 167X-XMAX for Mojave and 167X-XMAX for Catalina, either reversion was the same problem. Somebody said that question caused by "MemoryFix" module in web, So...is there a "MemoryFix" module in Ozmosis? or How can I fixup this problem?
