

OpenCore | Dell XPS 13 (9360) | HELP STUCK

Beitrag von „SirSnolte“ vom 25. März 2020, 00:24

hey!

Leider habe ich nur 21MB Grafikspeicher.

Wie im Bild zusehen haben wir zwei verschiedene config.plist, in der zwei unterschiedliche Werte bei *AAPL,ig-plattform-id* enthalten sind. Beide lassen sich booten also einmal per SSD Bootloader & einmal Usb Bootloader, wenn ich ihn aber so äändere wie es für uns Sinn macht, bootet er nicht und bleibt hängen(Error). Das im Anhang gezeigte Bild vom BootLog, ist von der funktionierenden plattform-id 90 00 61 95 .plist. | [EFI.zip](#)
