Hackintosh forgets authorizations

Beitrag von „griven" vom 27. März 2020, 13:40

Hi [ash100](#) make shure your SystemInformation (SerialNumber, BoardID, ROM, SMUUID and SystemID) stays consitend across reboots. Especially the SystemID and sometimes also the SMUUID is used by Programs to determine wether the machine is authorised to run the program or not/ the program is licensed or not. Unfortunately in some rare cases clover fail to inject the SystemID which may lead to unforeseen behavior such as lost authorisation in different programs (iTunes is affected as well as some third party programs) invalid license and stuff like that.

To overcome this issue it may be a good advise to double check if the SMUUID value is set in Clover SMBIOS Section (if it's not set clover injects or better spoken tries to inject the System ID taken from your System which might fail from time to time) and if Inject SystemID is enabled in clovers System Parameters Section. Setting both options should be enough to permanently fix your issue.
