/*

* XCPM power management compatibility table.

*

* Please note that this table is only a sample and may need to be

* adapted to fit your board's ACPI stack. For instance, both scope

* and device name may vary (e.g. _SB_.PR00 instead of _PR_.CPU0).

*

* **While the table contains several examples of CPU paths, you should**

* **remove all the ones irrelevant for your board.**

*/
