

Installing the MAC will reboot the PC

Beitrag von „Macko“ vom 7. April 2020, 20:14

I updated the BIOS. After updating the BIOS, the MAC installation starts and immediately restarts the PC. I tried the new Lila text, WhateverGreen, but nothing helps. The [BIOS settings](#) are recommended for MAC installation. I'm putting my EFI from USB, please help me what i got wrong. I have a GIGABYTE GA-B150N Phoenix-WIFI motherboard. Installing MAC I got the original from Apple's latest version, Clover I have the one I put in the attachment - without [distro...](#)

Thank you all for your help.
