# Installing the MAC will reboot the PC

**Beitrag von „al6042" vom 7. April 2020, 20:56**

That depends if you have an PS2 Mouse attached... that is something we also don't know...

If that's the case, use the VoodooPS2Controller.kext from your old EFI-folder and put it in the folder /EFI/CLOVER/kexts/Other, where you will find all the other necessary kexts.

Be aware:

I also switched your SMBIOS from an old iMac14,2, which is not a good choice with your hardware, to an iMac17,1.

You should check all the Apple services and try to login to them.
