Installing the MAC will reboot the PC

Beitrag von „Macko" vom 8. April 2020, 09:56

So I'm done, wireless mouse doesn't work. The cable mouse also does not work. VoodooPS2Controller kext didn't help. I plugged the mouse into USB3 and USB2 - no result. The keyboard is OK.

al6042, I don't know what kext to put there anymore ..

Here is my EFI which you gave me, plus there is also VoodooPS2Controller kext.

Please, is there any other possibility? Thanks in advance
