

Radeon VII: macOS Benchmarks, Undervolting, Overclocking, PowerPlayTable & Lüfterkurve

Beitrag von „DSM2“ vom 16. April 2020, 11:22

RadeonBoost Kext by [CMMChris](#)

Geekbench 5

10000	MacPro7,1 AMD Radeon VII	Meta	macOS 10.14	97163
10000	MacPro7,1 AMD Radeon VII (Overclocked)	OpenGL	macOS 10.14	76689

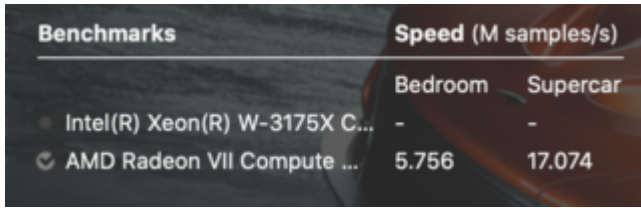

Geekbench 4

47000.0	MacPro7,1 AMD Radeon VII	Meta	Mac OS X 10.14.0	248852
47000.0	MacPro7,1 AMD Radeon VII (Overclocked)	OpenGL	Mac OS X 10.14.0	233667

Valley

Indigo Benchmark

The image shows a screenshot of a benchmarking application. The background is a dark, abstract image with some light streaks. The text is white and arranged in a table-like format. The table has two columns: 'Benchmarks' and 'Speed (M samples/s)'. Under 'Benchmarks', there are two entries: 'Intel(R) Xeon(R) W-3175X C...' and 'AMD Radeon VII Compute ...'. Under 'Speed (M samples/s)', there are two sub-columns: 'Bedroom' and 'Supercar'. The values for the Intel entry are '-' for both sub-columns. The values for the AMD entry are '5.756' for 'Bedroom' and '17.074' for 'Supercar'.

Benchmarks	Speed (M samples/s)	
	Bedroom	Supercar
● Intel(R) Xeon(R) W-3175X C...	-	-
● AMD Radeon VII Compute ...	5.756	17.074
