The PC does not turn off the keyboard backlight when turned off.

Beitrag von „Macko" vom 4. Mai 2020, 12:19

Hi, does anyone have experience on a Gigabyte motherboard with this problem?

In Windows, the keyboard backlight turns off when I turn off my PC. In Catalina, the keyboard is backlit even after switching off.

Is there any kext for that?

In the Mojave version it was OK.

Thanks 🤔
