Yosemite > Mojave mit Ozmosis und Z97X_UD5H [NVRAM Reset > Black Screen]

Beitrag von „Adnarel“ vom 4. Mai 2020, 12:59

Gut, oder auch nicht.

Mit "OAF2" Bios:

Grafikkarte scheint keinen Einfluss zu haben.

Nvidia mit MacPro3.1 -> Kein Bild bei Boot in Yosemite

-> [Install Stick](#) geht auch genauso nicht.

Es bleibt das schwarze Brett vorm Kopf 😄

BDMESG:

Slomofilm in Zip unten, kann man aber nur erahnen was da durchläuft.

Dein letztes ROM muss noch geprüft werden: mit NVidia oder RX? (Welches SMBIOS?)

p.S: bin erst mal kurz Einkaufen 😊
