

Eigenen 5K Monitor im iMac Design bauen

Beitrag von „bobshopsupreme“ vom 4. Mai 2020, 13:10

Thank you. I have checked and I can see the BIOS.

I cannot get 5k resolution in 10.13.6 with my GTX 1080 either on 1 cable or 2. For 2 x DP I just see two copies of the screen on the left and right side. I have tried pikera already with no effect.

In Windows 10 I can get 5k60Hz at 8bit per channel colour over one cable. 2xDP does not work properly and displays a 4k image even though Windows says it is 5k.

I'm not sure if my Windows settings are wrong or if my control board is not working as designed. I should be able to get 5k60Hz 10 bit colour over 2xDP in Windows with my Nvidia card.

I think I will try my 5700XT.

I will leave this here in case it is useful (even though it is in the wrong language). Sorry again and thank you for your reply.
