

RadeonBoost.kext - Benchmark Scores wie am echten Mac / unter Windows

Beitrag von „ozw00d“ vom 9. Mai 2020, 10:28

[adnbsr](#) very strange I tested out what happens if I do many things at the same time:

- open about 10 tabs in chrome (also YouTube running)
- compiling a project
- rendering a video in fcpX
- playing a game
- having some virtual machines running in VMware

i do everything for getting a very high utilization on gpu and cpu at the same time and there was a slightly spinning of the fans from the gpu.

the only difference I have is I'm using OpenCore and not clover. I haven't an idea if this makes a difference .

I have WEG running with flag agdpmod=pikera and radeonboost.kext running.

I don't have such a behavior as you're described.
