## **Beelink U55 "Hack Mini" - inkl. EFI**

**Beitrag von „coco3“ vom 14. Mai 2020, 17:19**

Code

1. I have already used this package I have also overwritten just the config.plist but nothing every effort is in vain I'm going crazy I don't know how to do it I could opt for an external sound card but not having the HD5500 that works makes me nervous
2. I also tried using your method with mojave it activates them acceleration by reading in -v but does not start the system because it falls into the kernel panic and restarts
3. sorry but my ignorance but there is no working EFI pack for this model?

Code

- 1.
