

X299 Tutorial - ASUS WS X299 SAGE/10G (Hilfe und Diskussionen)

Beitrag von „Extreme“ vom 15. Mai 2020, 12:45

Thanks to your excellent guide i managed to create the installation USB and install macOS Catalina.

In the post installation phase i configured everything but i can't get thunderbolt - GC Titan Ridge installed on the slot number two of mobo - to work. This is because despite having tried following your guide I can't edit SSDT-TBOLT3.aml with MaciASL. I have no confidence with this tool unfortunately. Could you please fix me SSDT-TBOLT3.aml?

I am attaching my EFI and my IOREG.

Thank you so much!

My hardware:

Anidees AI Crystal XL AR 3

Asus WS X299 SAGE/10G

Intel Core i9-7980XE

Noctua NH-U12A

AMD Radeon™ VII

Crucial Ballistic Sport 3200 Mhz 128 GB

Gigabyte GC-TITAN RIDGE

Sabrent 1TB Rocket NVMe PCIe M.2 2280 - macOS Catalina
