

# RadeonBoost.kext - Benchmark Scores wie am echten Mac / unter Windows

Beitrag von „Aluveitie“ vom 20. Mai 2020, 17:02

[CMMChris](#) it looks like RadeonBoost is breaking GPU video encoding in Handbrake (using VideoToolbox).

After disabling the kext it works again without any issues:

Code

1. [14:42:58] encavcodeclnit: H.265 (VideoToolbox)
2. [14:42:58] encavcodec: encoding with stored aspect 1/1
3. [hevc\_videotoolbox @ 0x7f9b23986200] Error: cannot create compression session: -12903
4. [hevc\_videotoolbox @ 0x7f9b23986200] Try -allow\_sw 1. The hardware encoder may be busy, or not supported.
5. [14:42:58] encavcodeclnit: avcodec\_open failed
