

# Legacy-Installation in Opencore anzeigen

Beitrag von „al6042“ vom 23. Mai 2020, 17:55

Oha...

Davon habe ich bereits irgendwo was gelesen, aber die Erfahrung selbst noch nicht gemacht, obwohl ich auf meiner Kiste im Dual-Boot arbeite.

EDIT:

Beim Schmökern in der Configuration.pdf ist mir aber direkt mal folgendes zu Gesicht gekommen:

## 12.1 Windows support

### Can I install Windows?

While no official Windows support is provided, 64-bit UEFI Windows installations (Windows 8 and above) prepared with Boot Camp are supposed to work. Third-party UEFI installations as well as systems partially supporting UEFI boot, like Windows 7, might work with some extra precautions. Things to keep in mind:

- MBR (Master Boot Record) installations are **not** supported.
- To install Windows, macOS, and OpenCore on the same drive you can specify Windows bootloader path (UEFI\Microsoft\Boot\bootmgfw.efi) in `ClassOverride` section.
- All the modifications applied (to ACPI, NVRAM, SMBIOS, etc.) are supposed to be operating system agnostic, i.e. apply equally regardless of the OS booted. This enables Boot Camp software experience on Windows.

Somit wirst du mit der Legacy-Version von Windows keine Chance in OC haben.
