

X299 Tutorial - ASUS WS X299 SAGE/10G (Hilfe und Diskussionen)

Beitrag von „insomnia“ vom 26. Mai 2020, 01:11

Did anyone here with Asus X299 Sage (base not 10g) managed to fully assign the USB ports under an SSDT?

That would be a life saver!

@Orc Mork re using bios 3101. Apparently this bios has the lock MSR broken and a few other things some people have been able to patch it so it's a bit more stable, some users reported working great, so google "3101 Patching ASUS BIOS and disable MSR lock". Myself I have also problems like GPU not displaying upon post & not posting sometimes regardless if using the patched or the Asus original bios. I have emailed Asus and asked for updates.

I recently upgraded to 10980xe and I'm having huge performance gaps between 2002 and 3101 as displayed on benchmark. I guess we can only wait for now can we?
