

Erledigt MacPro 1,1 kein Bild

Beitrag von „svenatkins“ vom 28. Mai 2020, 14:19

Use the following table to interpret the LEDs.

Location	Name	Color	Nominal	Press DIAG, LED button to display	Indicates
Led 1	Trickle Power	Yellow	On	Yes	Power supply is providing trickle power
Led 2	CPU B Error	Red	Off	No	CPU B halts on an IERR (instruction error)
Led 3	CPU A Error	Red	Off	No	CPU A halts on an IERR (instruction error)
Led 4	CPU B OT	Red	Off	No	CPU B is over temperature
Led 5	CPU A OT	Red	Off	No	CPU A is over temperature
Led 6	GPU Present	Green	On	Yes	EFI has configured the graphics card
Led 7	Power On	Green	On	Yes	All power rails are functioning
Led 8	EFI Done	Green	On	Yes	EFI is done loading

Note: There is a position on the logic board next to LED 1 for a SLEEP LED that does not have any LED installed. This is normal; the LED was used only in development. To determine if a Mac Pro computer is in sleep mode, watch the power LED on the front of the computer. It will slowly change brightness levels if the computer is sleeping.

schau dir mal die Tabelle an, mit der lässt sich das Problem zumindest eingrenzen.

Bei meinem war damals das LogicBoard kaputt seid dem ich das getauschte habe leuft der Mac ohne Probleme.
