

# Häufige Neustarts (Idle) unter 10.15.5

Beitrag von „Goron“ vom 29. Mai 2020, 08:02

Noe.

Die Benachrichtigung verschwindet halt, wenn du das Update ignorierst logischerweise 😏 ....  
aber du musst das schon ganz lesen:

## 7. How can we ignore Updates and Upgrades in the future? (10.15.4+)

Apple is providing something for 10.15.4+ users.

Starting with macOS 10.15.4, major releases of macOS can be deferred for up to 90 days using MDM.

*Apple Patch Notes*

The `forceDelayedSoftwareUpdates` key in the Restrictions payload will now apply to major OS versions in addition to software updates.

*Apple Patch Notes*

We already have the MDM Key `forceDelayedSoftwareUpdates` but after installing 10.15.4 you can now defer Major Upgrades for up to 90 Days.

Once macOS 10.16 is live, you will be able to hide the Major (Upgrade) and Minor (Point Release) Updates for 90 Days.
