Hello, i have followed the instructions, and i have used the EFI, folder from SPIDER, but i got stucked at apple logo.

First time it is loading 50%, after a restart is loading 85% and it remains there for 10 minutes and it automatically turns off the laptop.

I have made the usb drive with BDU software with Catalina os.

My laptop is Lenovo Y50-70 UHD 4K, i7-4710hq with gtx 860M 4GB. Bios version 3.03 and i have made all the settings metioned above.

Please help ...
