

Intel Wi-Fi: es wird spannend!

Beitrag von „hegmeg“ vom 5. Juni 2020, 19:24

Dankeschön [Sascha 77](#)

Bekommt jemand mit Mojave den Kext ans rennen? Bei mir klappt das leider noch nicht 😞

```
Kext with invalid signed (-67030) allowed: <OSKext 0x7fa1e2c286f0 [0x7fff916e58e0]> {  
URL = "file:///Users/michael/Desktop/itlwm.kext/", ID = "com.zxystd.itlwm" }
```

Code Signing Failure: code signature is invalid

Disabling KextAudit: [SIP](#) is off

```
(kernel) kxld[com.zxystd.itlwm]: The super class vtable '__ZTV13IOEventSource' for vtable  
'__ZTV11IOTaskQueue' is out of date. Make sure your kext has been built against the correct  
headers.
```

```
(kernel) kxld[com.zxystd.itlwm]: The super class vtable '__ZTV19IOEthernetInterface' for vtable  
'__ZTV15itlwm_interface' is out of date. Make sure your kext has been built against the correct  
headers.
```

```
(kernel) kxld[com.zxystd.itlwm]: The super class vtable '__ZTV8OSObject' for vtable  
'__ZTV15pci_intr_handle' is out of date. Make sure your kext has been built against the correct  
headers.
```

```

```
(kernel) kxld[com.zxystd.itlwm]: The super class vtable '__ZTV8OSObject' for vtable  
'__ZTV8CTimeout' is out of date. Make sure your kext has been built against the correct  
headers.
```

```
(kernel) Can't load kext com.zxystd.itlwm - link failed.
```

```
(kernel) Failed to load executable for kext com.zxystd.itlwm.
```

```
(kernel) Kext com.zxystd.itlwm failed to load (0xdc008016).
```

```
(kernel) Failed to load kext com.zxystd.itlwm (error 0xdc008016).
```

Failed to load /Users/michael/Desktop/itlwm.kext - (libkern/kext) link error.

Check library declarations for your kext with kextlibs(8).

Schönen Abend euch.
