

TINU oder besser gesagt "TINU Is Not Uni*****"

Beitrag von „al6042“ vom 27. Juni 2020, 12:48

Und dank [Lincoln](#) 's Hinweis und der darauf hin erfolgten Prüfung auf GitHub, gibt es auch eine neue Beta, mit folgenden Änderungen:

- Fixed Catalina support
- Added Big Sur support
- Added [SIP](#) detection
- Reworked Installer app download window
- The app will now start with a password prompt, either graphical or via terminal
- Added diagnostics mode with administrator privileges
- Password prompt is no longer mandatory for the diagnostics mode
- Improvements to the installer app detection system and added support to Big Sur
- Improved drive detection system
- Added root users detection and optimization (when the app is running as root there will be some optimization to the way scripts are handled)
- Various code optimization and improvements
- Commented the boot-files replacement code which will be removed in the future
- The readme which is created on installer drives has been rewritten
- Bug Fix
