

macOS Catalina Installation bleibt hängen

Beitrag von „simon310“ vom 1. Juli 2020, 18:24

Ich bin mir sicher, dies so getan zu haben, habe es nun aber nochmal wiederholt, wie du es beschrieben hast [Jono](#) .

Schau dir bitte mal den Screenshot an, so müsste es dann doch aussehen, oder nicht?

EDIT:

```

Die Installation läuft an, scheitert aber irgendwie am Download. Das ist auch die letzte Zeile, die mir ausgegeben wird (zumindest die Installation an sich betreffend).

Der angehende Hackintosh hängt via LAN Kabel an einer 100k Leitung, der Download dürfte also nach einer Stunde schon lange abgeschlossen sein. Mittlerweile werden mir statt 23min 162h Installationsdauer angezeigt, falls das relevant ist.
