

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „mathewgx“ vom 4. Juli 2020, 15:29

[Zitat von hitman20](#)

I have now taken an older version of OpenCore 0.6.0 and therefore the system no longer freezes.

I compiled the ACPIBatteryManager.kext myself from the-darkvoid's Github Repository. This also correctly detects when I unplug my power adapter and plug it in again.

Whatevergreen then only needs to be adjusted so that my internal 4k screen works or maybe someone already has something going on?

Could you share your acpibatterymanager.kext please ?
