

RadeonBoost.kext - Benchmark Scores wie am echten Mac / unter Windows

[CMMChris](#) Sehr interessant ist, dass ich nun nach einer knappen Woche PB3 in etwa die gleichen Metal-Werte habe, wie vor dem Update (PB2). Spielt auch keine Rolle, ob OC 060 oder OC 059, was meine erste Vermutung war, sonst hat sich nichts geändert. Cache geleert, WEG enabled/disabled usw.

... Ich werde daraus einfach nicht schlau.
